

AMF Theme

Summary

[Acme Movie Fanatics \(AMF\) is developing an online community using Liferay Portal for its members. Part of the initial phase is to redesign the look-and-feel of this community site. AMF has hired a design firm to create this new look-and-feel for their site. Now, they need this new design translated into a Liferay Portal theme.](#)

Objective

[Create a new AMF theme based on the given design.](#)

Requirements

Assumptions

- Initial set of content has been created (they are available via a LAR file for the AMF site which is provided).

General Specifications

- Theme should have 2 color schemes (light & dark).
- Header should span across the entire width of the browser window.
- Content and footer should have fixed width.
- Header and footer both have navigation bars with different designs.
- The navigation bar on the header should be horizontal with a red background.
- The sign-in link should look like a button per the design screenshot.

Technical Specifications

- Breadcrumb should be removed from theme (not simply hidden via CSS).
- The AMF logo should be included directly in the theme via the `init_custom.vm` file (so to not be alterable in the Control Panel UI).
- To keep our site performance at the highest level, custom CSS should be kept to 200 lines or less.
- Do **not** use `!important` with your CSS selectors.
- Remove portlet borders.
- Use Sass and Compass.

- Footer should be created in a new vm file.

Design

[Home Page \(\[full size\] 1\)](#)

[Upcoming Release \(\[full size\] 2\)](#)

[Light Color Scheme \(\[full size\] 3\)](#)

[Trailer \(\[full size\] 4\)](#)

Resources

The existing AMF site and all the related assets can be imported using the following [LAR file] 5.

components and features used html, css, theme, plugins-sdk
